

Improved Competitiveness through Green Procurement

CPT02H

Problem background

With Governments endorsing international agreements to reduce CO₂ emissions to help manage climate change, procurement departments in both private and public entities will be under increasing pressures to procure sustainable products, processes and services. If procurement officers, marketing and sales stakeholders are not prepared and equipped with related skills, their organization will increasingly fail to satisfy emerging requirements. All this will add to financial penalties and bad organisation perception by clients, partners and other stakeholders.

Experienced and qualified tutors in green procurement

Blended Learning with free access to e-Learning content even after successful course completion

Customized courses to address organization specific management and market segment

MECB Corporate Training Division is supported by a team of experienced and highly qualified educators. Our team is trained to MSc or PhD level, and is supported with pedagogic formation. This ensures that our clients receive the right knowledge, in the right format, to help them effectively exploit the acquired skills in a short timeframe.
